

Bio-Zyme

Your Organic Solution to a Clean Green Environment

 **Bio-Zyme** is a high performance, non-toxic, non-allergenic and biodegradable multiple enzyme degreaser, odour controller and cleaner.

Septic Tank

Problems

Septic tanks sometimes become smelly and ineffective because of the overuse of strong cleaning products in the home. Other causes and different types of medication can upset the bacterial balance in the septic system by overloading the storage capacity and blocking leach drains.

Solutions

Adding Bio-Zyme speeds up the digestion of waste solids, allowing natural bacteria to solubilize and break down. By breaking up the solids the flow through the field drains is clearer and cleaner, so odour-free waste can pass freely into the septic tank field and be absorbed by the soil without ponding, which help prevents ground water pollution.

Shower | Toilets | Basins | Floor etc

Cleaner

-  Use Bio-Zyme Cleaner for all household cleaning at 30ml per 1 litre of water.
-  Pour 100ml Bio-Zyme Cleaner/Industrial concentrate weekly down any shower, toilet, basin or floor waste traps to maintain odour free and efficient system.

Kick Starting the Septic Tank

Industrial

-  Flush 2 litres of Bio-Zyme Industrial down the toilet or directly into septic tank after it has been cleaned out to kick start the process.
-  Use Bio-Zyme Industrial for any blockages.

Bio-Zyme is endorsed by the leading manufacturers of water treatment systems and septic tanks in New Zealand.

Chlorine based cleaning products are not user friendly in septic tanks.
